PROFESSIONAL SUMMARY

Security-minded engineer focused on finding and fixing vulnerabilities before attackers do. Hands-on with vulnerability scanning, secure coding practices, and security awareness training.

EDUCATION

B.Sc. in Cybersecurity, KFUPM (2021-2025).

Field of specialization: Cybersecurity

CORE SKILLS

Network Security, Python, Penetration Testing, Linux, OWASP, Threat Analysis

TOOLS & TECHNOLOGIES

Nmap, Burp Suite, Wireshark, Metasploit, Python, Kali Linux

PROJECTS & ACADEMIC EXPERIENCE

Vulnerability Scanner

Role: Security Engineer - Duration: 3 months

Developed a Python-based scanner that detects common web vulnerabilities such as outdated headers, open ports, and basic injection points, producing a prioritized, human-readable report.

Tech stack: Python, Nmap, Requests, SQLite, Linux

Outcome: Surfaced 12 misconfigurations across test environments.

Phishing Awareness Platform

Role: Full-Stack Security Developer - Duration: 2 months

Built a platform to run controlled phishing simulations and track click rates, then deliver targeted micro-training to users who fall for simulated attacks.

Tech stack: Python, Flask, PostgreSQL, Bootstrap

Outcome: Reduced simulated-phishing click rate from 34% to 11%.

TARGET ROLES

Security Analyst, Penetration Tester, SOC Analyst

ACHIEVEMENTS

- Reported 3 valid vulnerabilities through a university bug program.
- Built a phishing-awareness program used in a 200-person workshop.
- Holds an entry-level security certification.
